

Recycled Content

Bradford Glasswool products contain between 50% and 80% recycled glass

Bradford Rockwool products contain up to 40% recycled materials - initiatives are currently being trialled including “briquetting” to increase recycled content levels to 65%

Not only does the use of recycled content reduce demand on virgin resources, it also saves landfill space by diverting materials from the solid waste stream, and reduces the amount of energy used – and greenhouse gases emitted – during the manufacturing process
